

ServiceNow Safe Workplace Four-app suite and dashboard

Helping our customers make the return to workplace work for everyone ServiceNow has launched Safe Workplace, a four-app suite and dashboard designed to help companies manage the essential steps for returning employees to the workplace and support everyone’s health and safety. Immediately available on servicenow.com/safeworkplace, the Safe Workplace app suite is powered by the Now Platform.

ServiceNow Safe Workplace helps companies assess both their workforce and workplace readiness as they prepare for employees to return to the workplace.

Workforce and Workplace Readiness Apps, plus Safe Workplace Dashboard

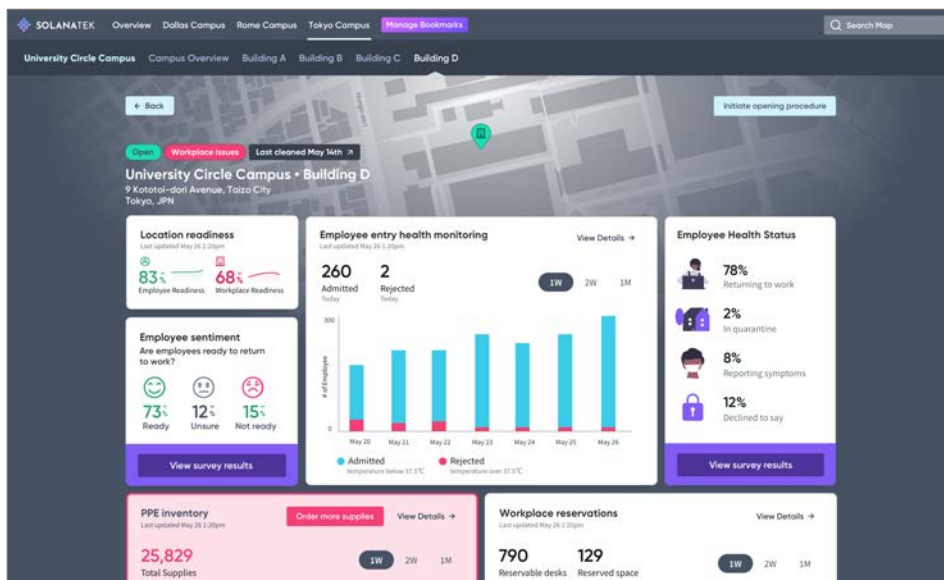

1. Employee Readiness Surveys
2. Employee Health Screening
3. Workplace Safety Management
4. Workplace PPE Inventory Management

Gauge workforce readiness for return to workplace

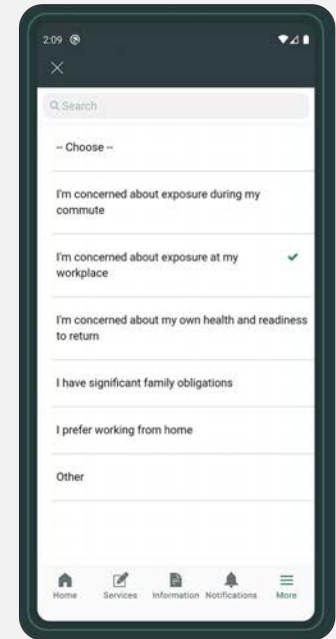

Regular, empathetic communication with employees has never been more important. With the ServiceNow Employee Readiness Surveys application, organizations are enabled to gauge the preparedness of their employees to return to the workplace. HR leaders can continuously connect and engage with employees to gain insight into their personal readiness, uncover availability and return timeframe, see their interest level in returning to work, and reveal concerns such as personal health, family obligations, and anxiety about workplace safety. Based on responses, employers can measure and determine the steps needed to ensure employees feel safe and secure upon their return.

Manage workspace distancing, shifts and sanitation to support employee safety

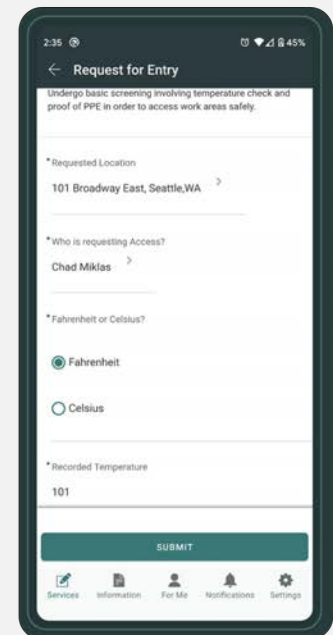

Workplace Safety Management provides workplace service managers the ability to quickly configure clean and socially distanced workspaces for employees to safely return to their workspace. In conjunction with department

leaders, they can assign employee shifts to those available workspaces for a given time period.

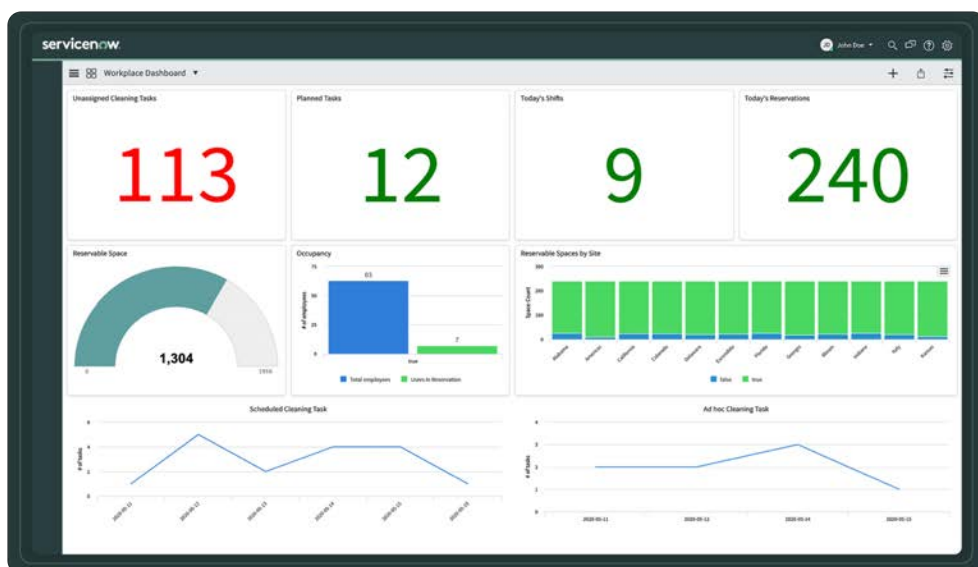

Prepare employees for safe return to the workplace

With the ServiceNow Employee Health Screening application you can facilitate employee screening for elevated temperature as a control to prevent possible infections from spreading in the workplace. Companies can screen employees, the results are recorded, and depending on the results, individuals can be admitted or denied entrance. Administrators can view trends via a reporting dashboard and track the return of employees into their facilities over time.

Additionally, the PPE (Personal Protective Equipment) application helps organizations manage and monitor the needs of the workplace to support the physical safety of your workforce. In a single snapshot, it provides a comprehensive view of inventory by each facility, an aggregate scope of the entire workplace, and historical data on how equipment levels have changed over time. Current inventory levels can be updated daily for accurate and real-time inventory management.

View your organization's readiness to open at-a-glance

The ServiceNow Safe Workplace Dashboard provides data visualization for all the Safe Workplace apps. Overlaid with a map and publicly available infection data, it gives organizations the ability to geographically see the density of infection rates and allows you to drill down into specific locations. Workplace sites are marked to indicate its ability to open, and remain open, based on workforce and workplace readiness.
